

Peplink SD-WAN

PEPLINK SD-WAN is centrally managed and monitored.

Overview

SD-WAN is a revolutionary way to approach the simplification of branch office networking and assure optimal application performance by using centrally controlled and managed WAN virtualization.

Unlike traditional WANs, SD-WAN delivers increased network agility and cost reduction. SD-WAN has its roots in Software Defined Networking (SDN), the underlying principle of which is to abstract the network hardware and transport characteristics from the applications that use the network.

The Peplink SD-WAN Advantage – The combination of products and technologies can help you build SD-WAN networks with unbreakable connection resilience, unmatched deployment flexibility, and intuitive ease of use.

Key Differentiators

- **Flexibility:** Capable of taking multiple links and turning them into a single connection
- **Speed & Reliability:** Add more links to increase speed and reliability
- **Automatic Failover:** Continually check the health of all links and routing traffic around inactive or intermittent connections
- **Encryption:** Links can be encrypted and comply with Emergency Service Network and UK Policing standards
- **Load Balancing Algorithms:** Decide how the device transitions between your links with a variety of configurable load balancing algorithms
- **Site-to-Site Configuration:** Securely bridge networks with minimal configuration to communicate between all your devices

- **Application Awareness:** Simply set-up traffic priorities to manage application traffic automatically
- **Bonding & Diversity:** Connect multiple WAN connections for resilience, and bond connections for improved throughput

Mobile Bandwidth Bonding

Untethered from fixed line – Combine the bandwidth of several mobile connections to form an ultra-fast data link. Sustain bandwidth – hungry and latency sensitive task without the need for fixed lines, such as rolling workplace with full access to multi-cloud and security services, HD video streaming and mobile clinic.

- Support multiple connectivity technologies
- Combined to form one logical WAN connection
- Establish unbreakable high-bandwidth SD-WAN connections

VPN For Branch Networking

Aggregate your connections with SpeedFusion. This technology powers enterprise VPNs that tap into the bandwidth of up to 13 low-cost cable, DSL, 3G/4G/LTE, and other links connected anywhere on your corporate or institutional WAN.

Whether you're transferring a few documents, or driving real-time POS data, video feeds, and VoIP conversations, SpeedFusion pumps all your data down a single bonded data-pipe that's budget-friendly, ultra-fast, and easily configurable to suit and networking environment.
